

WELCOME TO

Our Mission

Reducing Aircraft Operating Costs by **Providing Resourceful** **Component Solutions...**

Rotor-wing operators and maintenance facilities have traditionally replaced damaged/worn components with new OEM spares. In the past, there simply was not an alternative. Our FAA approved repair products provide a lower cost alternative to new part purchase. Our experienced technical staff works in conjunction with the FAA and, in some cases, the OEM Design Engineers to design, approve & implement proprietary component repairs.

Please keep in mind the offerings within this catalog reflect our current capabilities only for the specific aircraft model(s) you have selected. Our product base consists of thousands of repairs for a vast array of components eligible for installation on Bell, Sikorsky, Eurocopter, McDonnell-Douglas, Boeing aircraft, and is continuously expanding. Please contact us for anything not listed.

The cost of our repairs is typically a fraction of new. We save helicopter operators and maintenance facilities millions of dollars every year. All of our repairs are FAA approved and include an 8130 certification and a full one (1) year/one thousand (1,000) hours warranty on workmanship.

We offer a no risk/no charge repair evaluation for unserviceable components - so send us those components and let us show you how you can contract your maintenance costs and expand your bottom line.

Isn't it time you discovered what the world's largest operators have known for over 15 years?
